

Type of Position: Research Assistant - Chemistry
Salary: Negotiable based on qualifications

Terpenoid Therapeutics, based in Coralville, IA, is an ambitious early stage biotechnology company focused on the development of therapeutics for cancer and osteoporosis. We offer scientists an opportunity to collaborate and discover in a dynamic and growing start-up environment. We are currently recruiting outstanding candidates, ready to put forth the extra effort required for our aggressive product development schedule. Candidates available for full-time or part-time positions will be considered. Terpenoid Therapeutics values diversity and is an equal opportunity employer.

The responsibilities of the position include: performance of experiments as directed by senior research staff, preparing and presenting research results in both oral and written formats, maintenance of laboratory equipment, ordering and organization of reagents and laboratory supplies.

The ideal candidate will have a minimum of a BS degree and 2-3 years work experience in organic/medicinal chemistry; strong technical expertise in modern synthetic methods; experience in synthesis, purification, and characterization of organic compounds using modern chromatographic and analytical techniques including NMR, LC/MS, UV, HPLC; solid computer skills and experience with databases. Individuals with more advanced degrees will be considered.
